# NASA Aeronautics Programs

## Fundamental Aeronautics Program

Conduct fundamental research that will produce innovative concepts, tools, and technologies to enable revolutionary changes for vehicles that fly in all speed regimes.

## Integrated Systems Research Program

Conduct research at an integrated system-level on promising concepts and technologies and explore/assess/demonstrate the benefits in a relevant environment

## Airspace Systems Program

Directly address the fundamental ATM research needs for NextGen by developing revolutionary concepts, capabilities, and technologies that will enable significant increases in the capacity, efficiency and flexibility of the NAS.

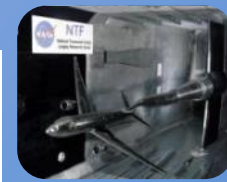

## Aviation Safety Program

Conduct cutting-edge research that will produce innovative concepts, tools, and technologies to improve the intrinsic safety attributes of current and future aircraft.

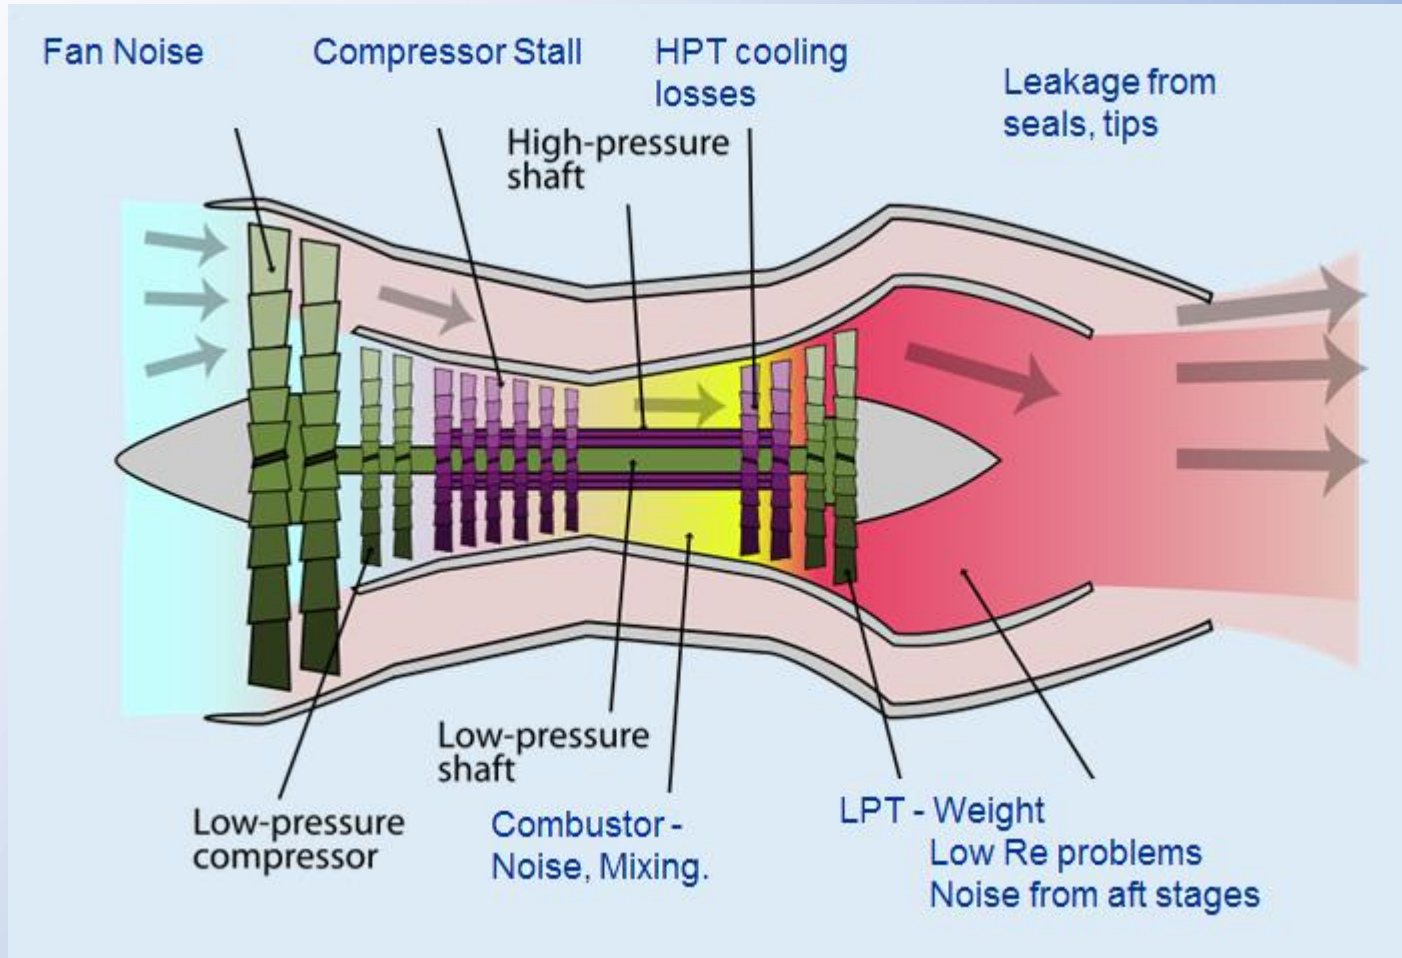

## Aeronautics Test Program

Preserve and promote the testing capabilities of one of the United States' largest, most versatile and comprehensive set of flight and ground-based research facilities.

## Incidence, Low Reynolds Number Challenges

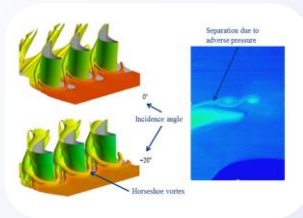

Separation due to  
adverse pressure

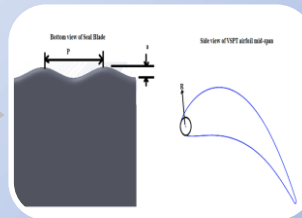

# Outline

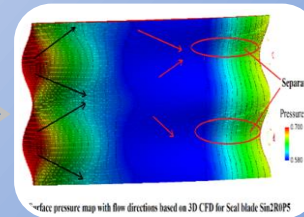

Motivation

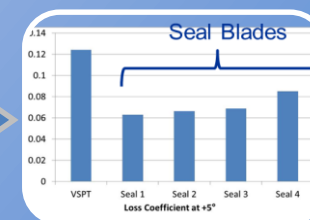

Background

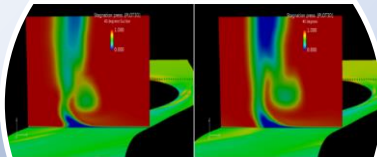

Extraction and Application

Simulation and Testing

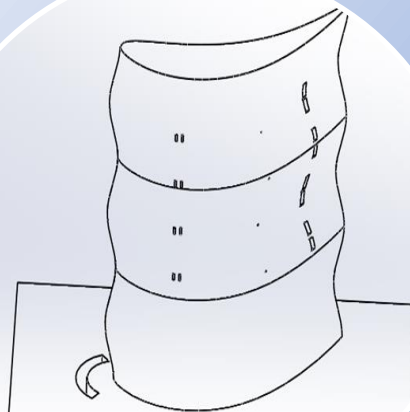

Results and Conclusions

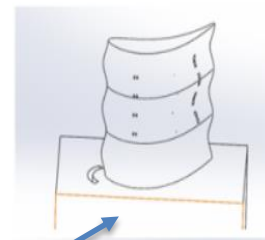

Slot upstream of  
Leading edge at the  
hub for suction

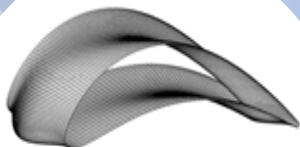

Trailing edge slots with  
spanwise pulsing  
(adjacent slots pulse  
out of phase)

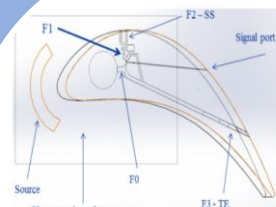

Holistic concept

Plenum to remove  
incoming signals

Seal Blade for  
operability, acoustics

Fluidic network to  
direct traffic and  
manage frequency  
content

## Alternative Approaches

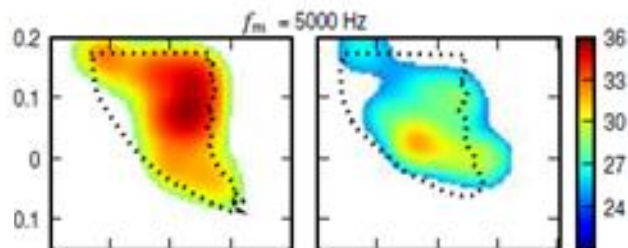

- Flow control
  - Requires power
  - Local effects that could be detrimental elsewhere
  - Cannot adjust to changing environment
  - VGJs (Vortex generating jets) extensively researched
  - Blowing into BL is common
- Design compromise by averaging over mission
- Noise reduction by blowing into wake costs 5% compressor bleed – unacceptable

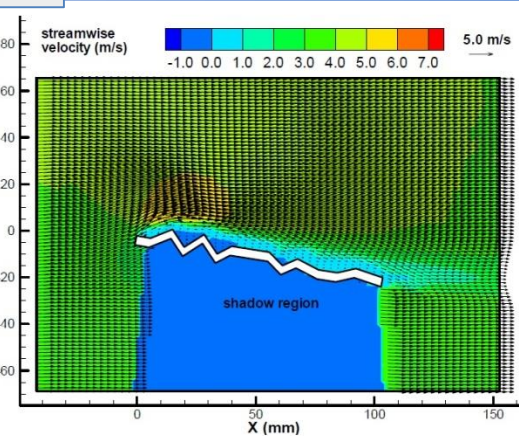

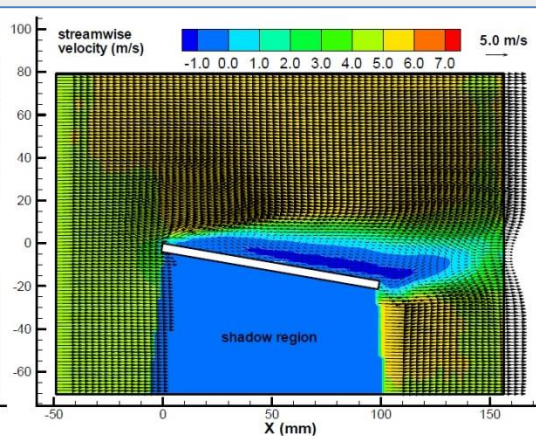

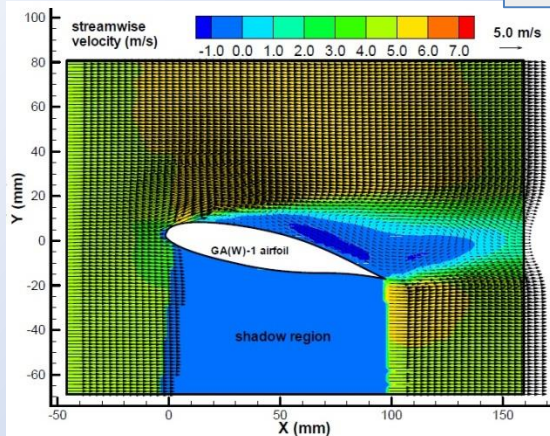

# Bio-inspired Approaches

Fish et al., "The Tubercles on Humpback Whales' Flippers: Application of Bio-Inspired Technology" .

Geyer et al., "Silent Owl Flight, Experiments in the Aeroacoustic Wind Tunnel"

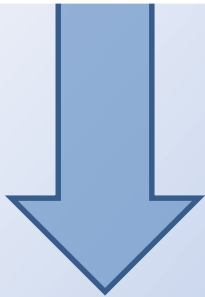

Tamai et al., "Aerodynamic Performance of a Corrugated Dragonfly Airfoil Compared with Smooth Airfoils at Low Reynolds Numbers"

## Harbor Seal

- “Harbor seals use their whiskers to analyze water movements (hydrodynamic trail following).
- This structure effectively changes the vortex street behind the whiskers and reduces the vibrations that would otherwise be induced by the shedding of vortices from the whiskers (vortex-induced vibrations).”
  - Hanke et al (2010)

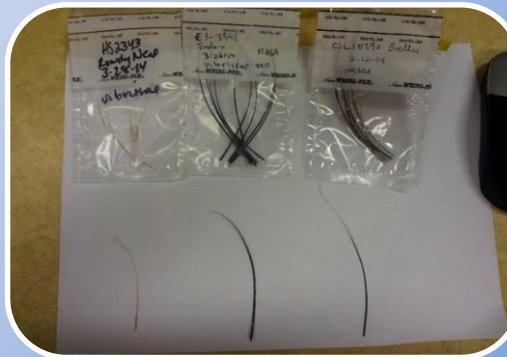

Hypothesis: Whiskers must have some degree of incidence tolerance to enable detection of prey proximity and direction

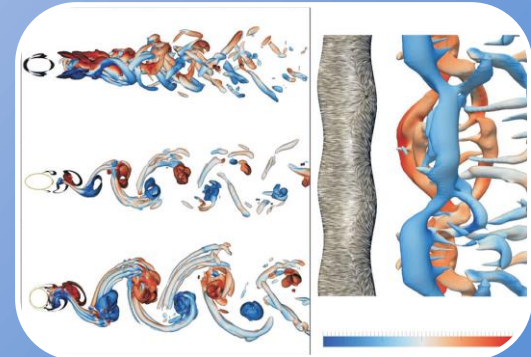

Harbor Seal

Seal swimming

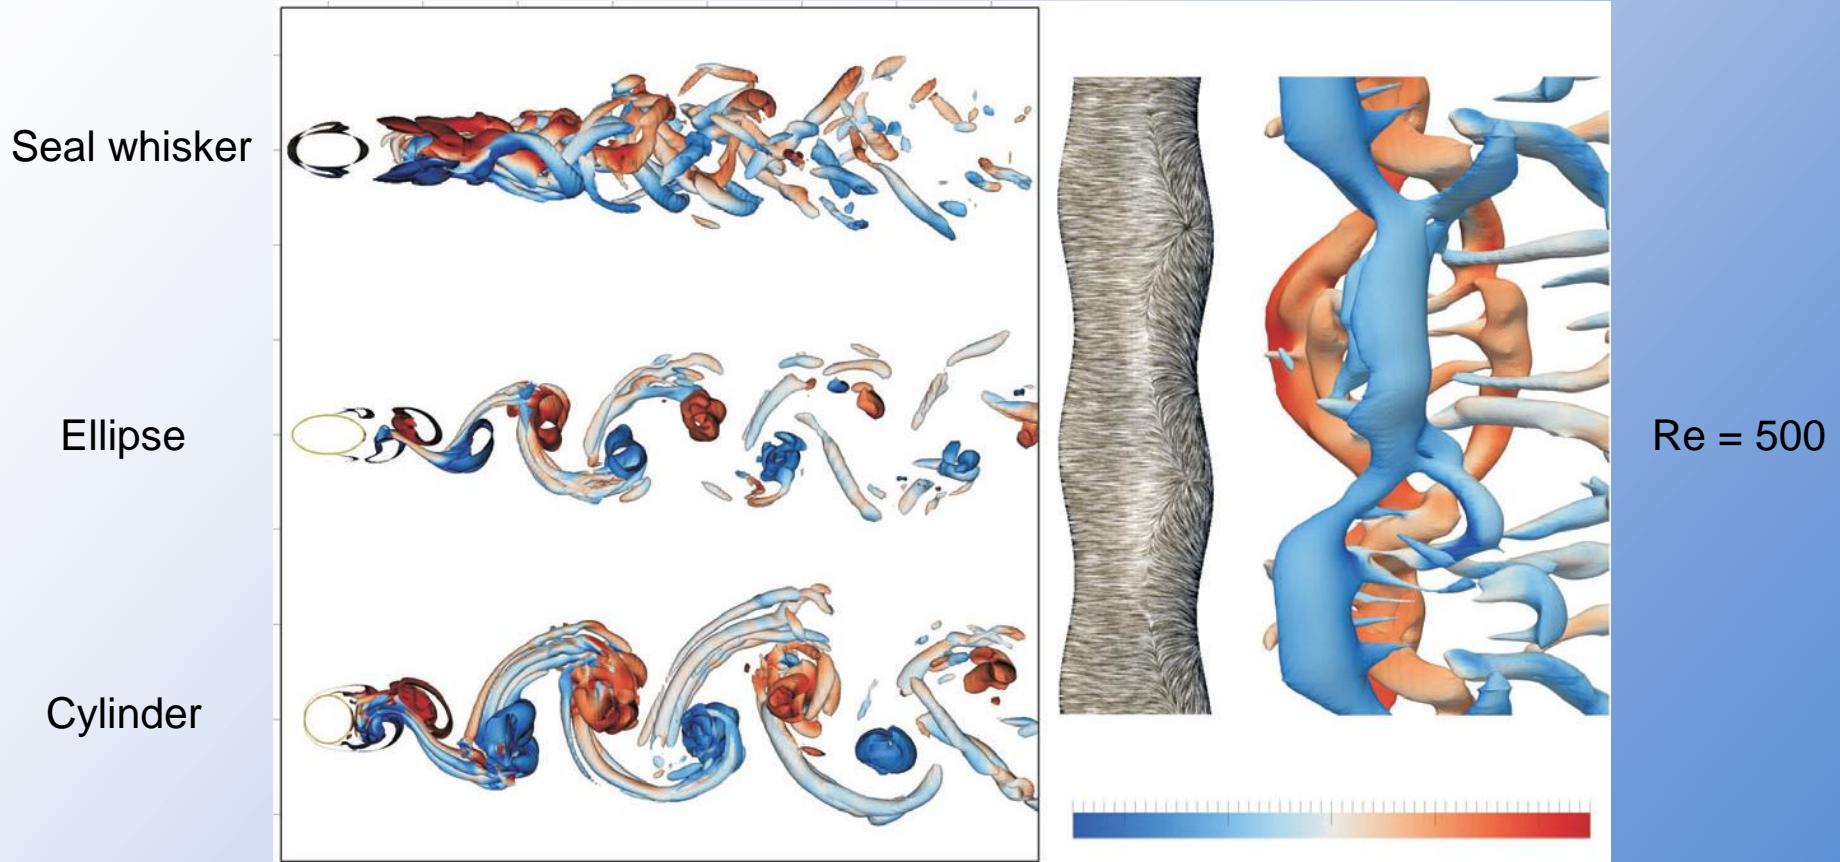

Whisker samples

VIV results from Witte et al. (2012)

## Harbor Seal

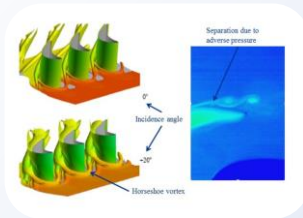

PIV on vibrissae at U of Rostock. Witte et al. 2012. Figure shows Q-criterion

- 40% mean drag coefficient reduction over cylinder
- 90% reduction of unsteadiness

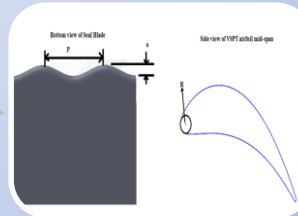

# Outline

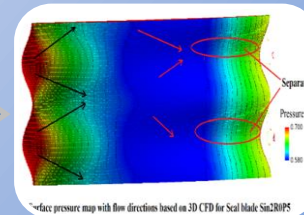

Motivation

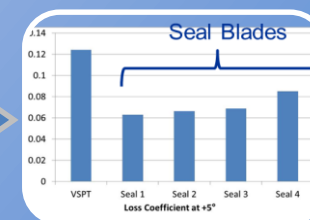

Background

Extraction and Application

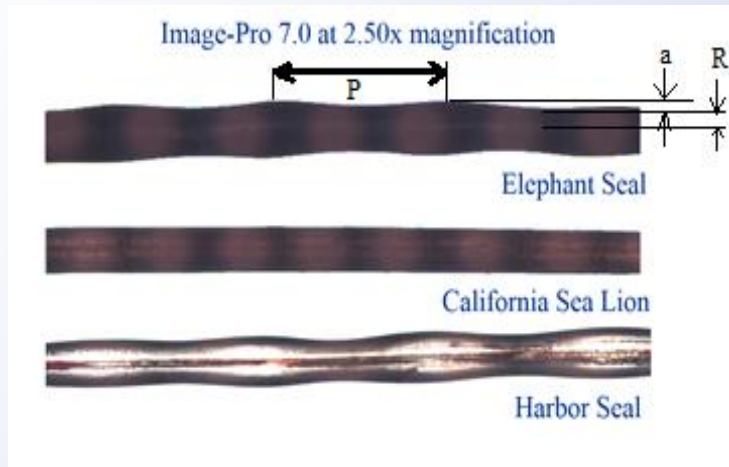

Simulation and Testing

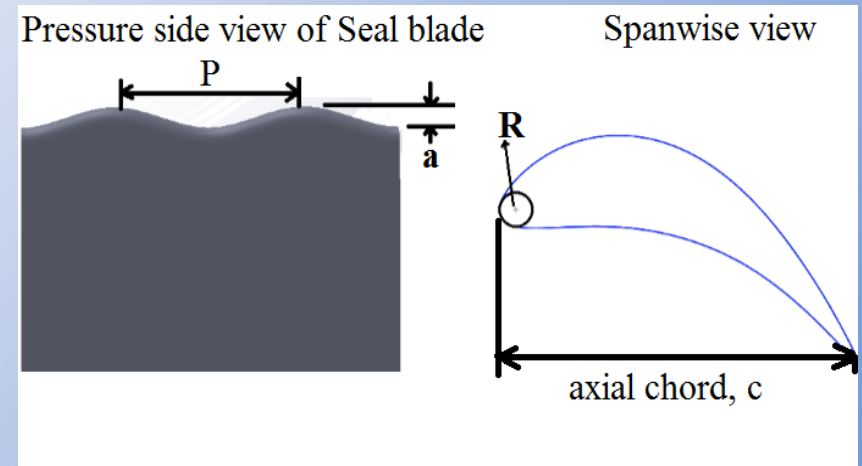

Results and Conclusions

- Create span-wise pressure gradient on suction side using span-wise undulations
- Push adverse gradient to valleys near trailing edge

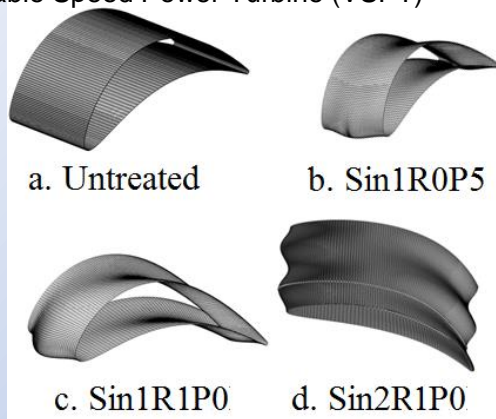

**Figure 4. Scans of Pinniped vibrissae using optical microscope showing vibrissae parameters**

**Figure 5. Parameters of undulations for the 'Seal Blade'**

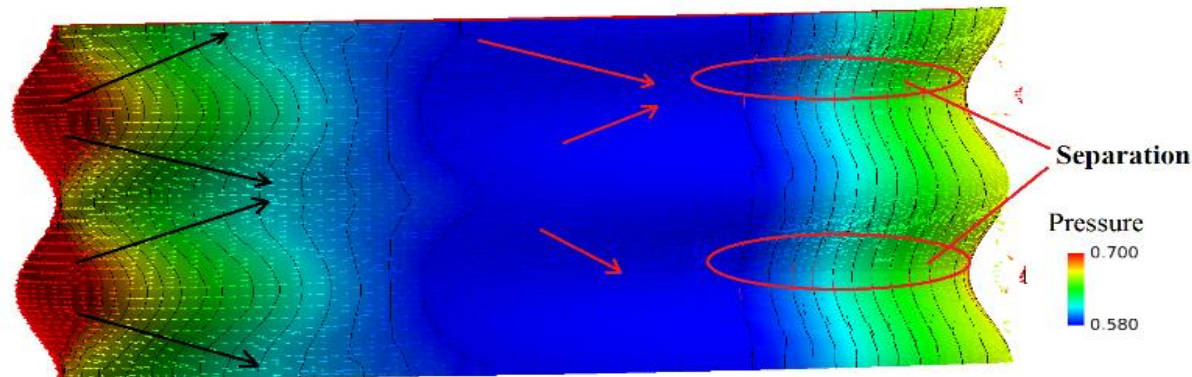

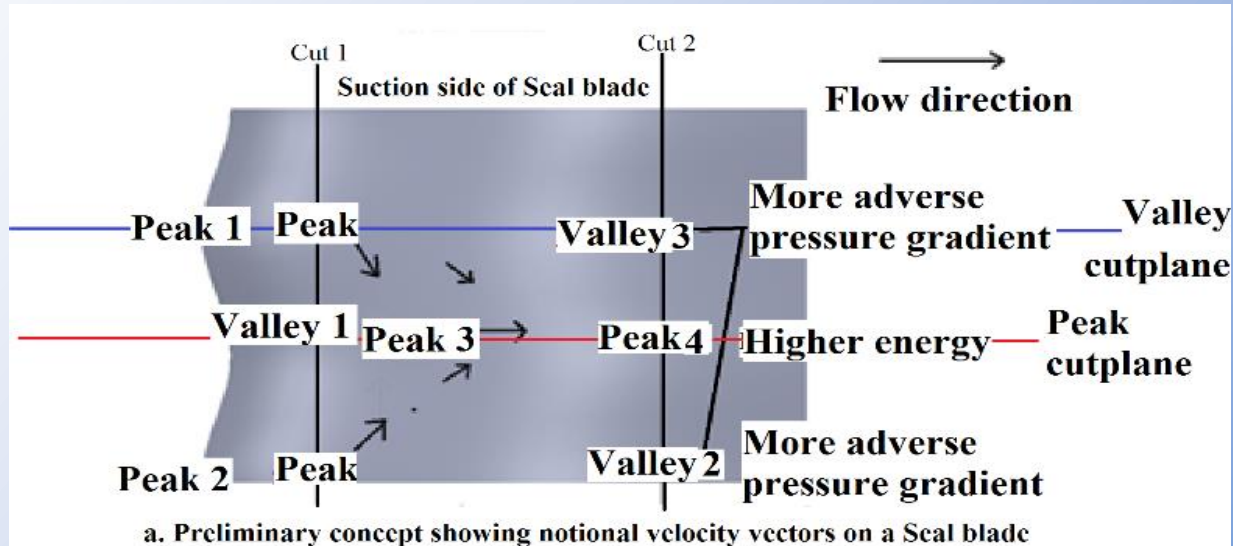

Variable Speed Power Turbine (VSPT)

Parameters	Seal	Sin1R0P5	Sin1R1P0	Sin2R0P5	Sin2R1P0
Reference Radius, R	0.54	0.46	0.46	0.46	0.46
Peak to Peak, P	1.82	1.55	1.55	3.00	3.00
LE amplitude, a	0.12	0.12	0.23	0.12	0.23
ratio R/P	0.29	0.30	0.30	0.15	0.15
ratio a/P	0.07	0.07	0.15	0.04	0.08

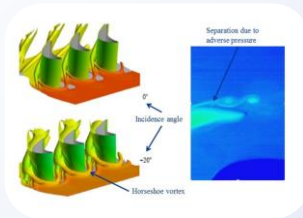

- Trailing edge valleys occur at span-wise location of leading edge peaks
- Peaks transition to valleys at crown location

Simulation and Testing

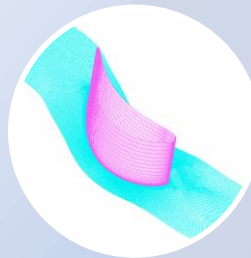

Results and Conclusions

# Feasibility Study of Biomimetic Concept

**Water table visualization**  
• CFD qualitative validation

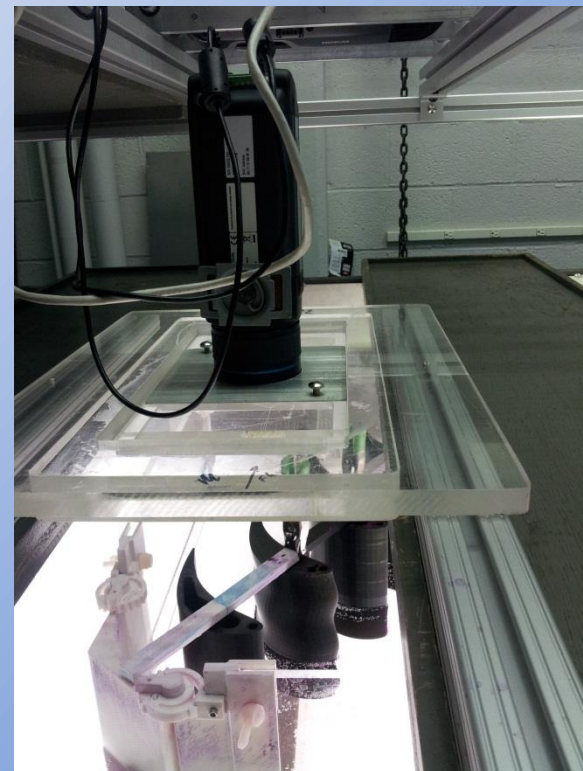

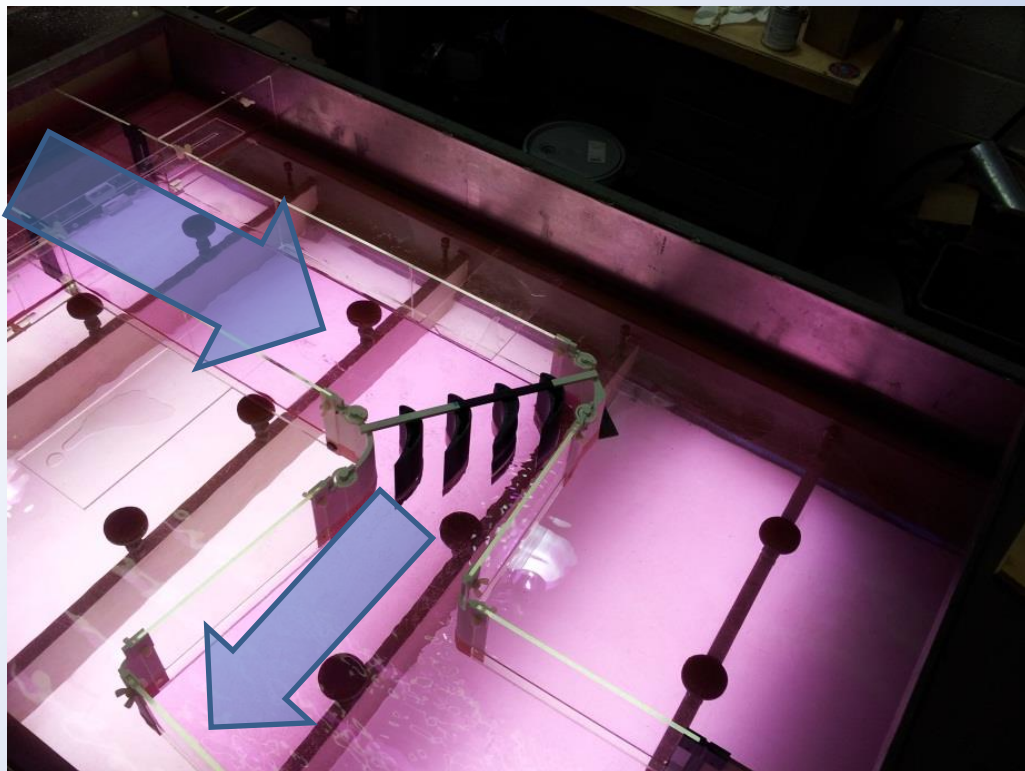

**Unsteady 3D CFD using Glenn-HT**

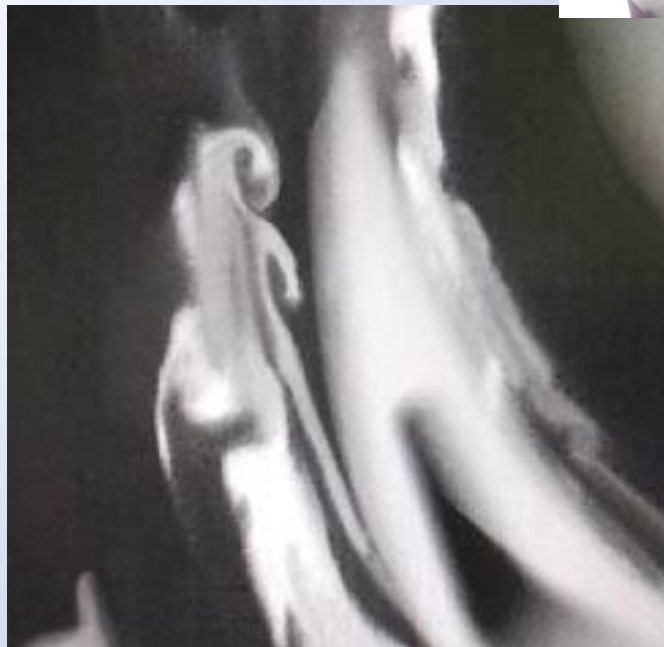

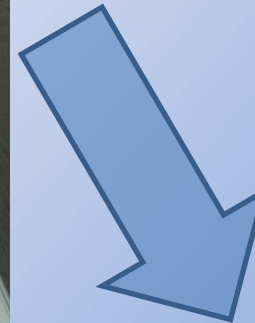

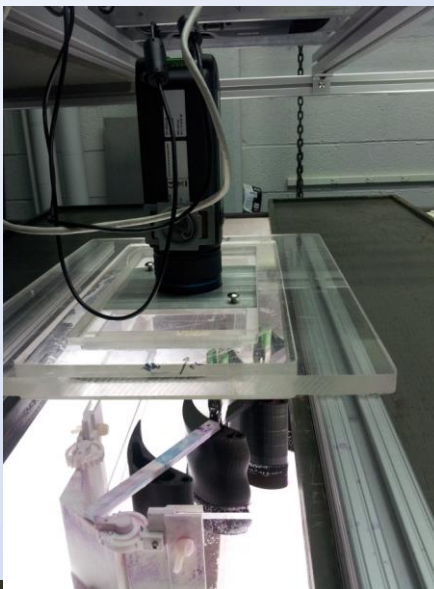

- Cp distribution at various span-wise locations
- Average wake pressure-loss coefficient 10% chord downstream of TE
- Multiple incidence angles

**Wind Tunnel Testing**

- SW2 cascade facility
- Total pressure surveys at 10% chord downstream of TE
- Hotwire surveys at 10% chord downstream of TE
- Multiple incidence angles

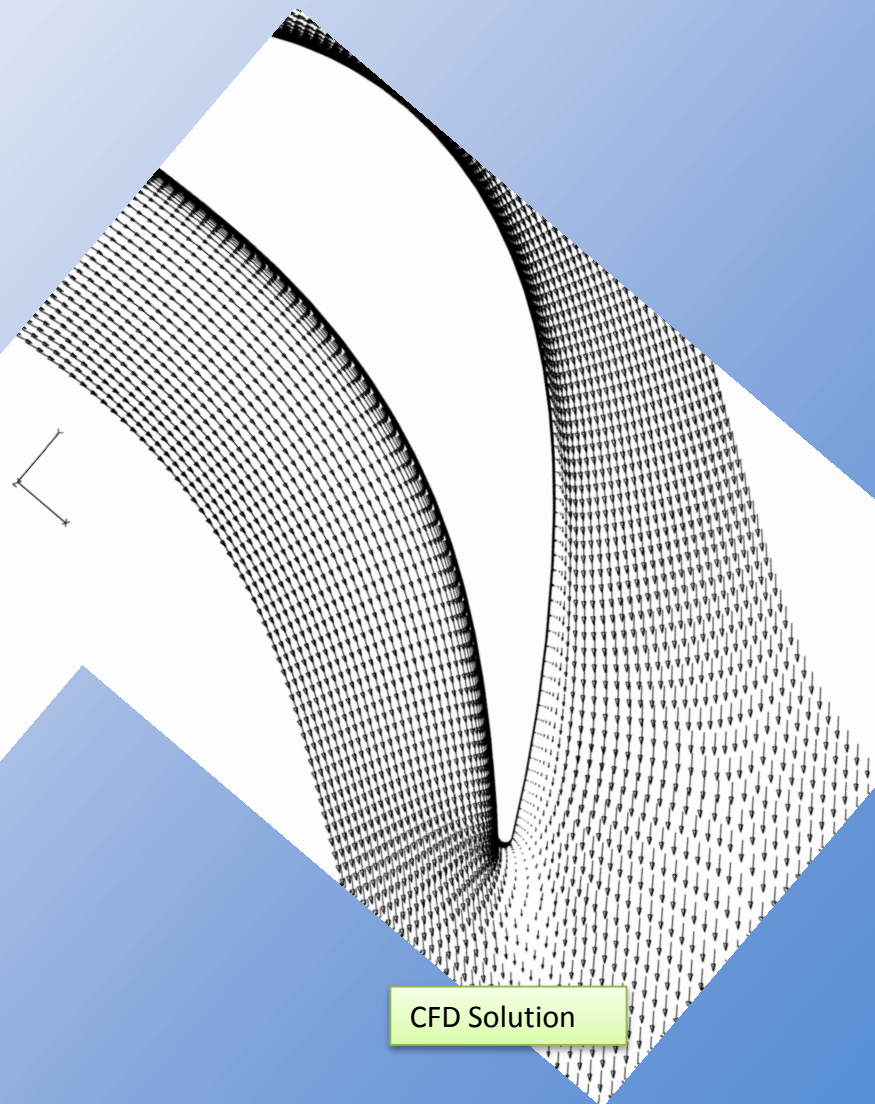

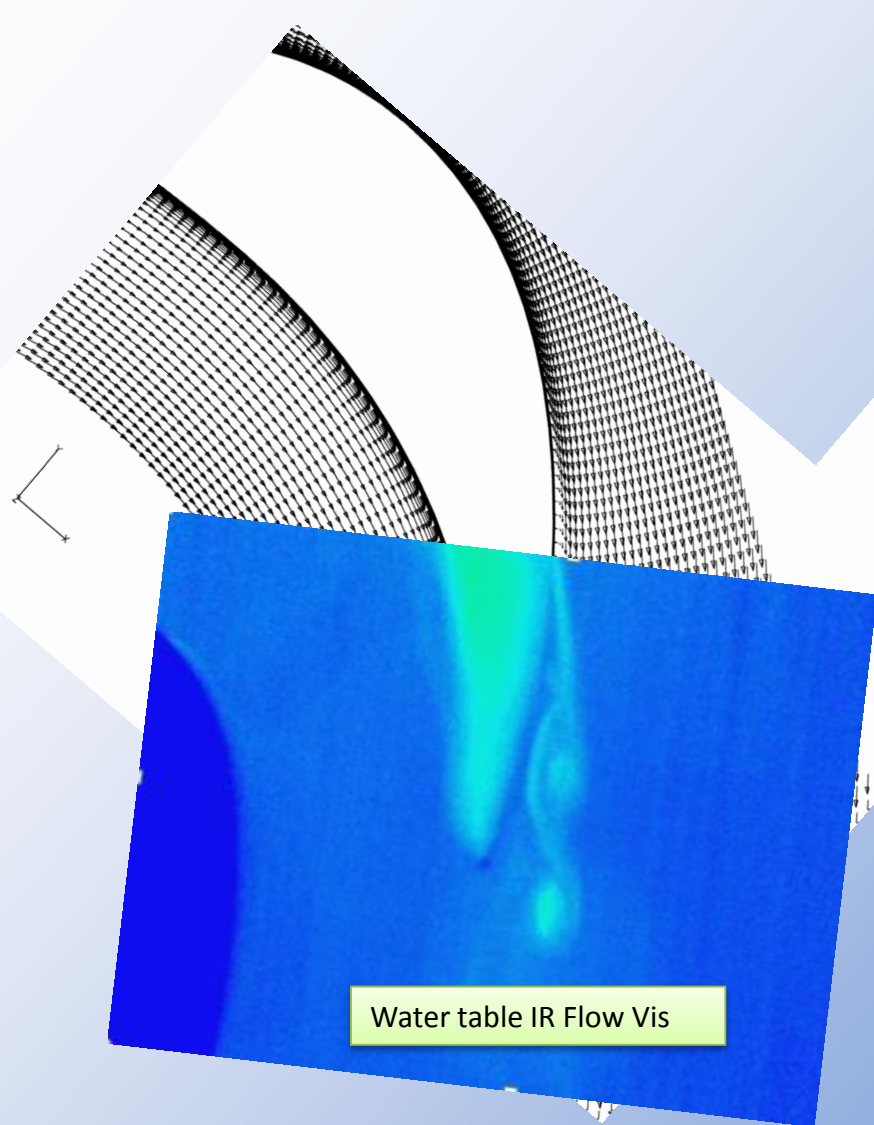

VSPT – 0 incidence

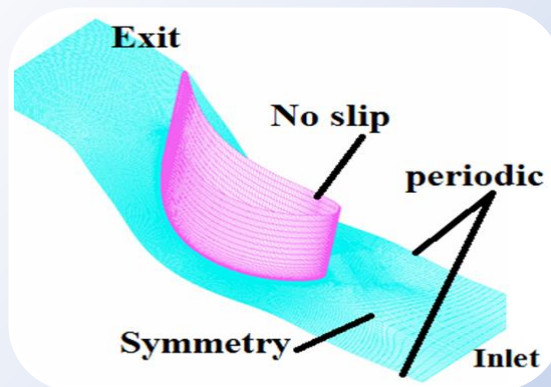

Seal Blade – 0 incidence

## CFD Qualitative Validation

CFD setup

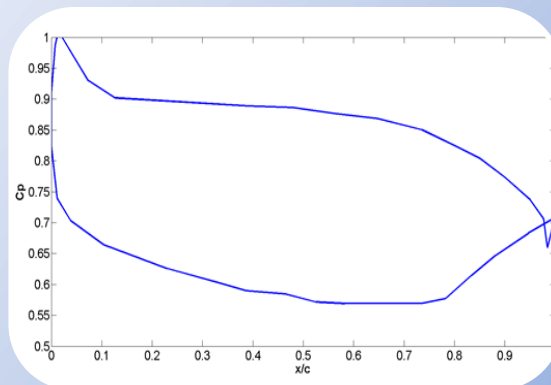

a. SW-2 test facility

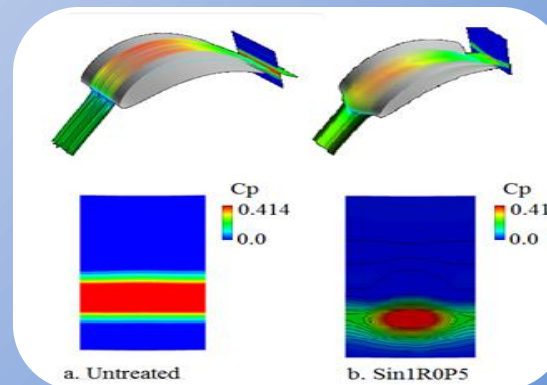

b. Test blades installed in SW-2 wind tunnel

Wind tunnel SW-2

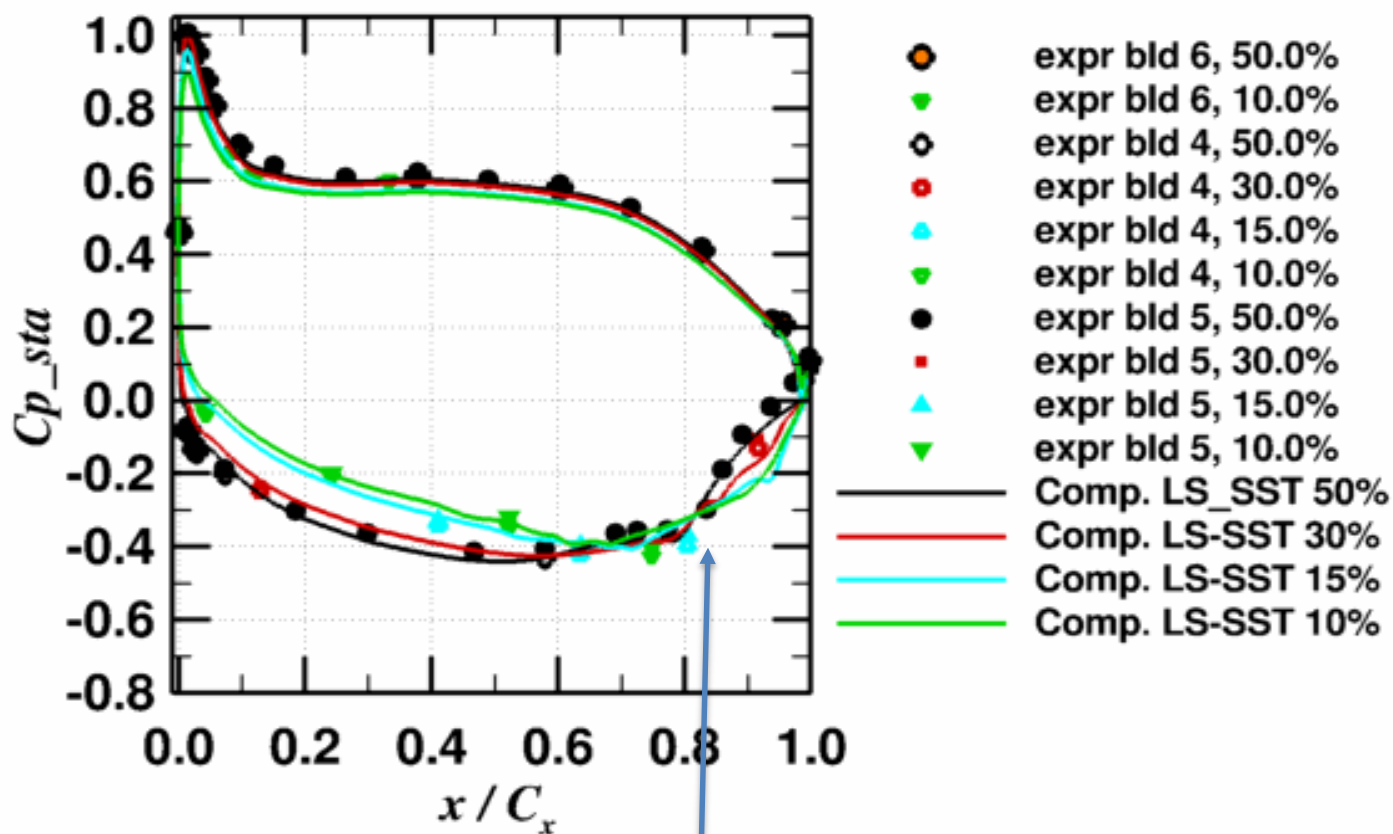

Low inlet turbulence ~ 4%,  
Re = 100,000

Pressure profiles - CFD

Blade pressure  
distribution – CFD and  
experiment

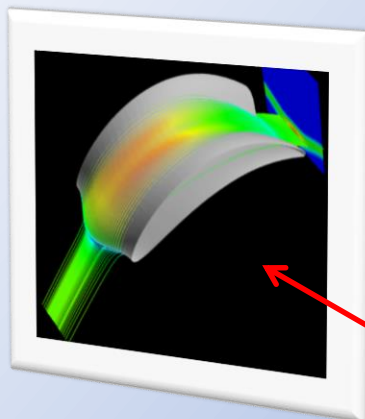

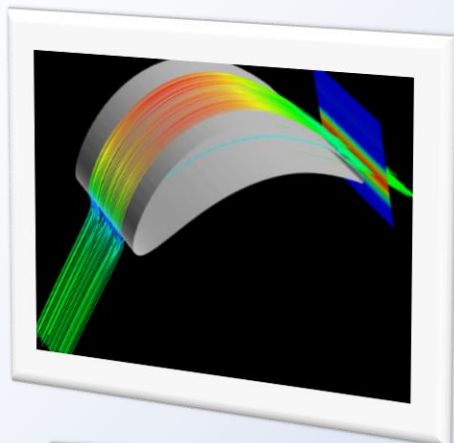

Separation captured by CFD (black line)

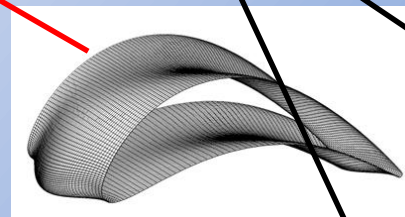

Untreated

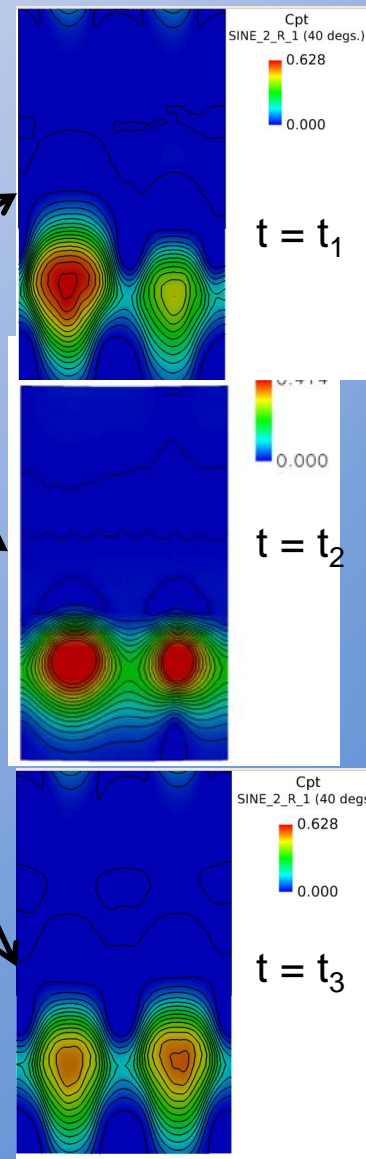

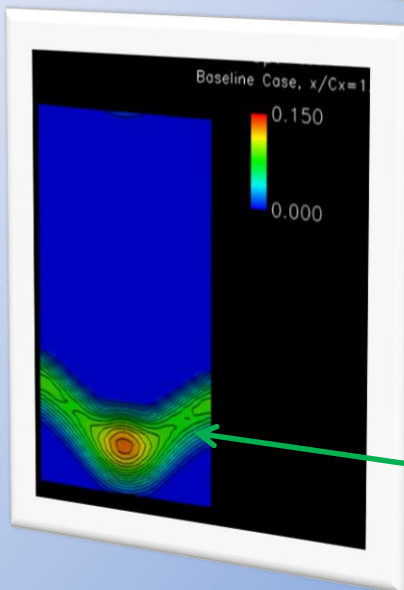

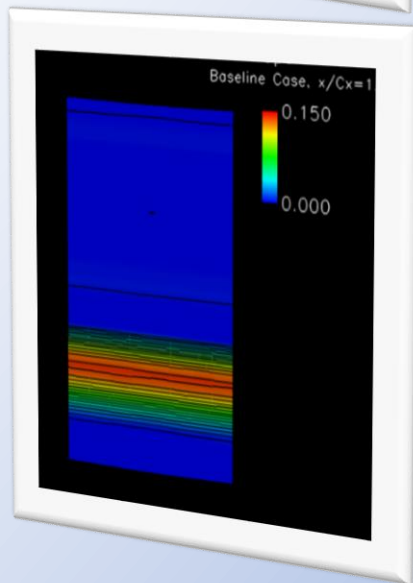

Seal Blade

Noise reduction through wake control

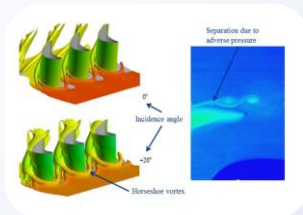

Fuel burn reduction due to elimination of separation

Extraction and Application

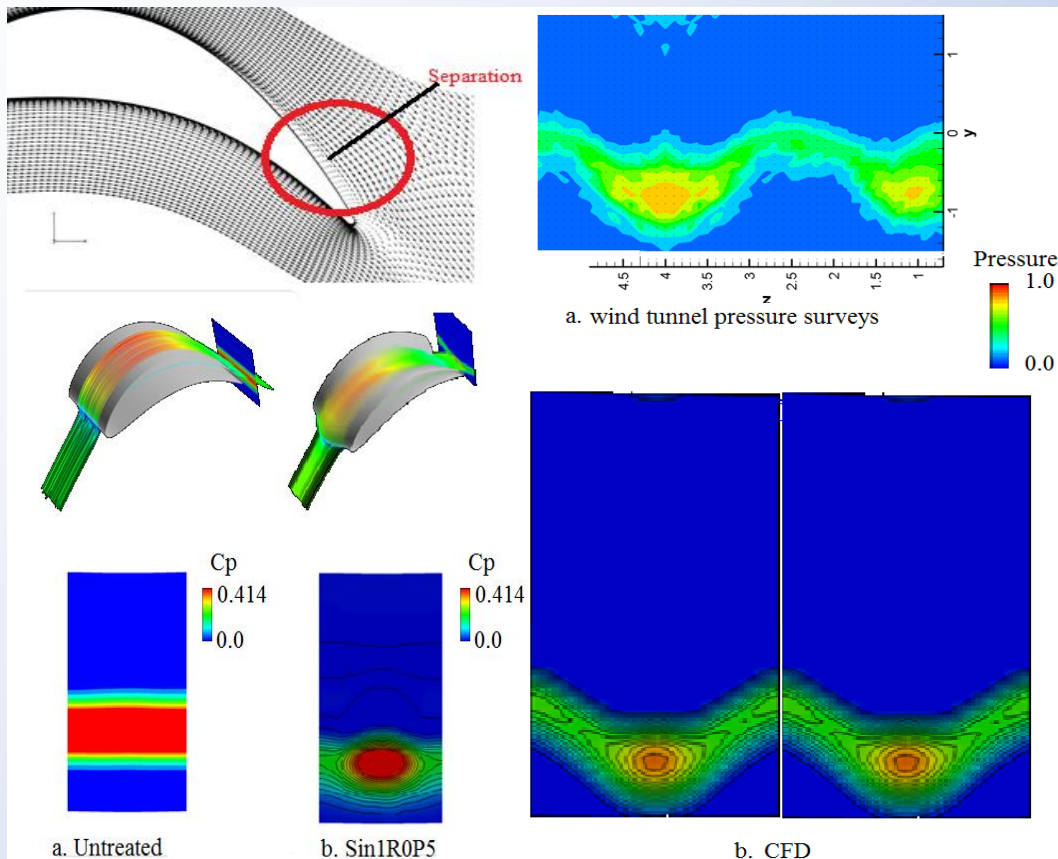

Simulation and Testing

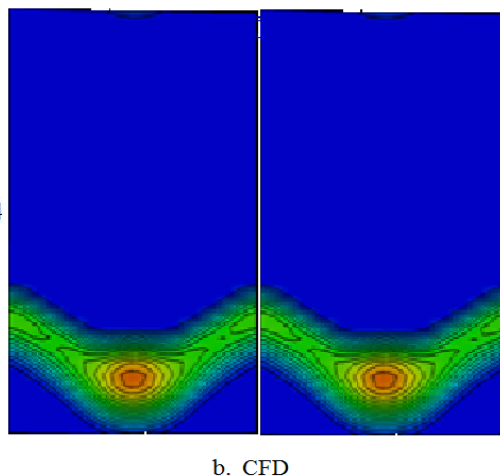

Results and Conclusions

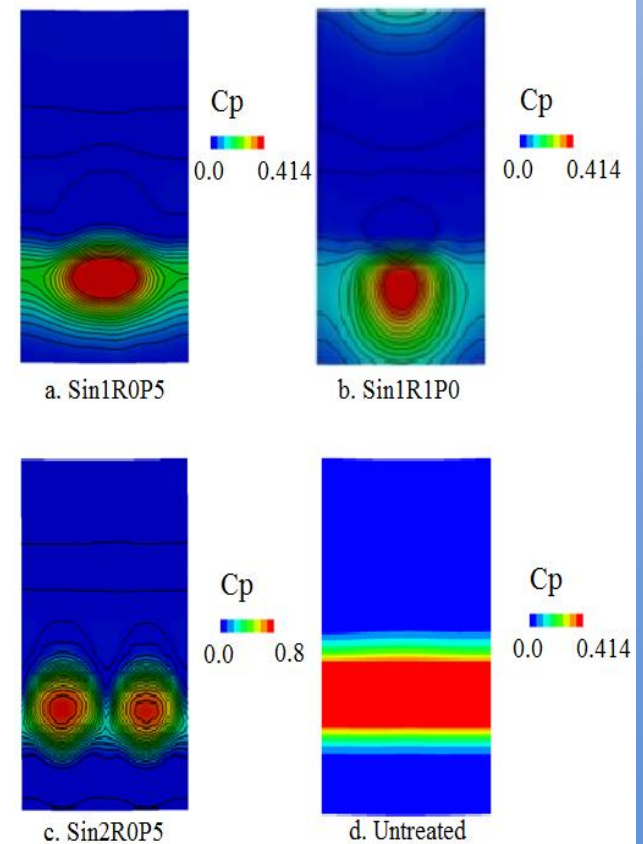

**Figure 14. Bottom - pressure loss coefficient for a. Untreated blade and b. Sin1R0P5 Seal blade at  $+5^\circ$  incidence angle. Top - Relative location of planes at  $x/c = 1.1$ .**

**Figure 15. Static pressure in the wake of Sin1R0P5 Seal blade obtained from a. Wind tunnel total pressure survey of the wake at  $x/c = 1.1$  and b. CFD simulation at  $+5^\circ$  incidence angle**

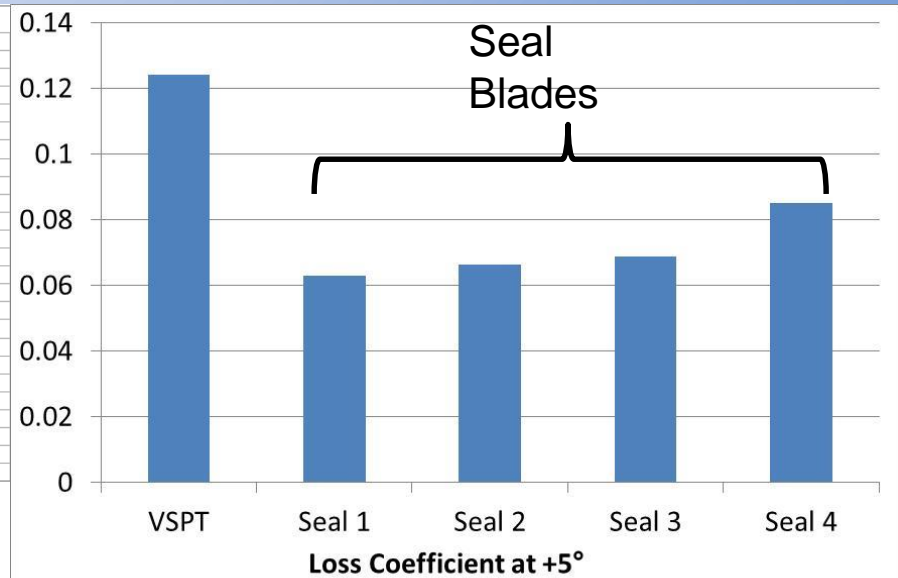

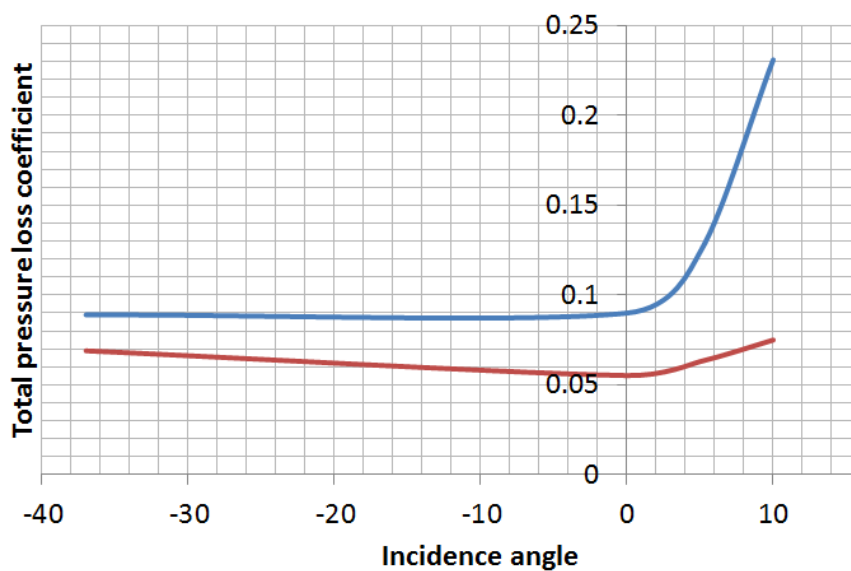

**Figure 17. Wake pressure loss coefficients for Seal blades compared to Untreated blade.**

Incidence tolerance over wide range leads to fuel burn reduction

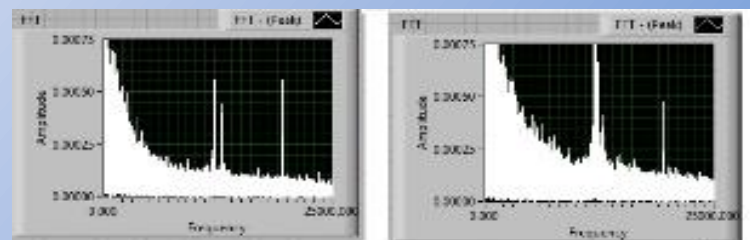

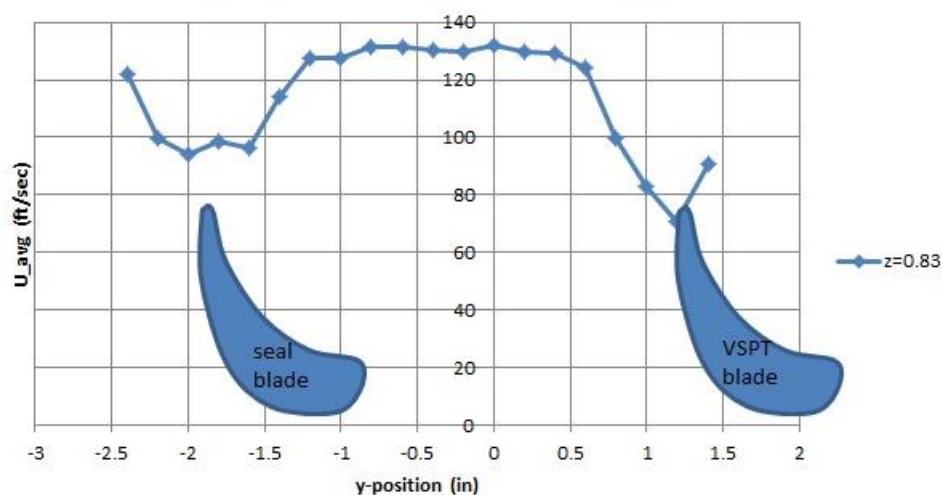

50% improvement in pressure recovery leads to fuel burn reduction

# Circumstantial Evidence

Hotwire survey, seal blade, slot 1

Seal blade

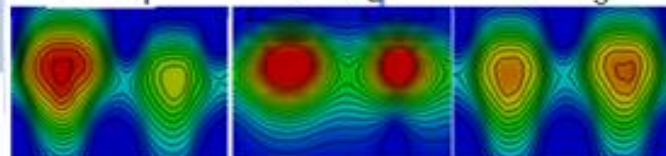

VSPT

Pressure Loss coefficient at random time intervals

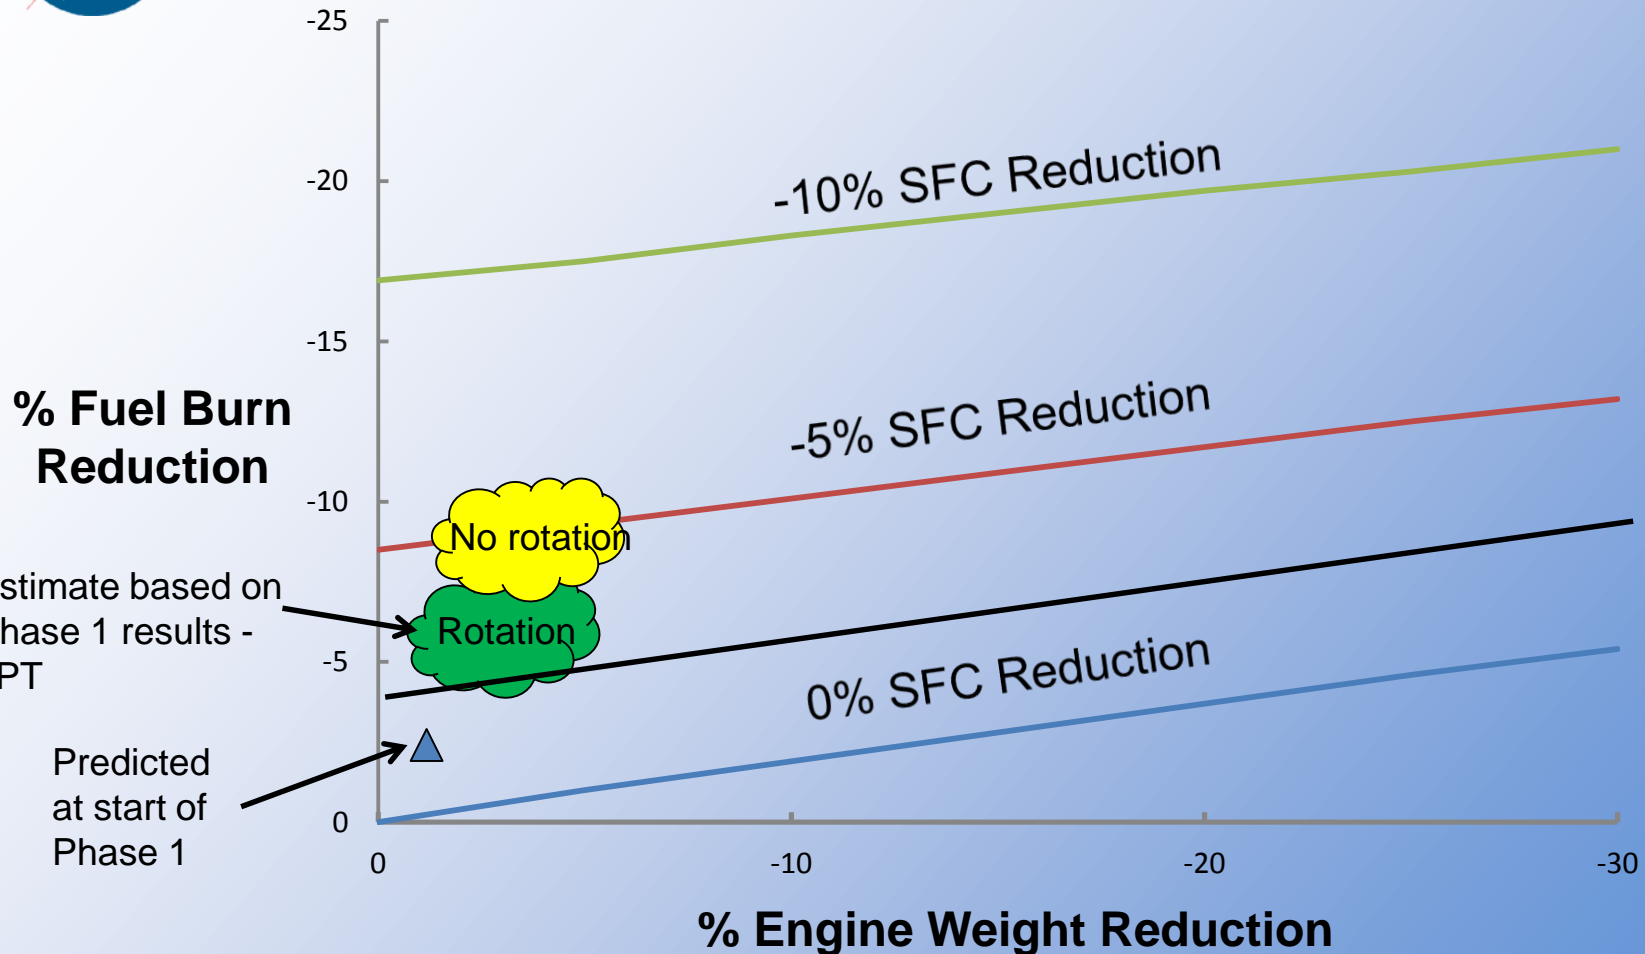

$t = t_1$

$t = t_2$

$t = t_3$

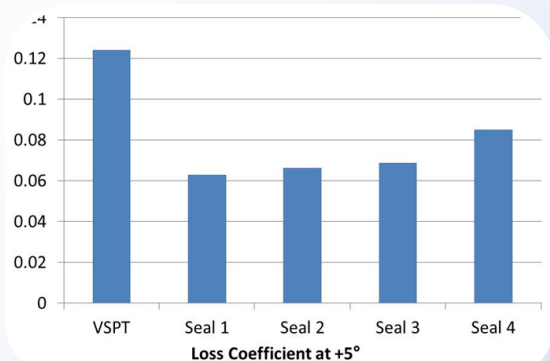

Possible reduction in broadband noise

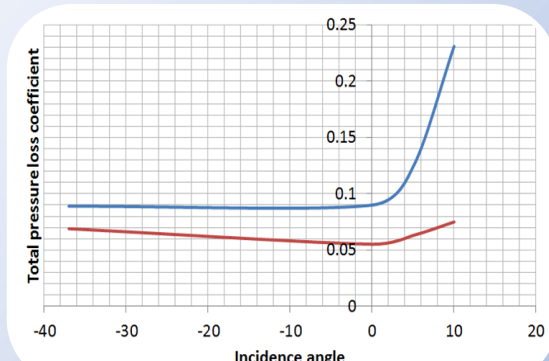

- » This was previous work for a 300 PAX aircraft
- » Benefits might be slightly lower for N2A (767 class) aircraft

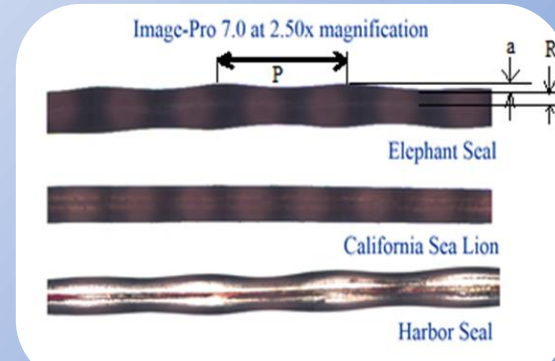

# Conclusions

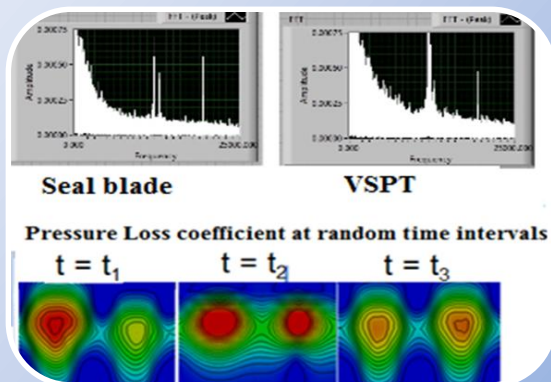

Bio-inspired blade showed 50% drag reduction over baseline

Blades treated with the Seal Vibrissa-like undulations were shown to be insensitive to incidence change

Blade with seal whisker LE parameters showed best results

Possible benefits to noise reduction

Several other applications could benefit more directly
